

Futaba Soil

Wastewater treatment sludge to a healthy soil.

Futaba Sankyo Corporation
www.kamtecs.co.jp

The company was founded in 1984, and collects and composts organic waste responsibly. Since 2015, the company is a part of Tusneishi Kamtecs Corporation.

Fermentation is the tradition of Futaba Sankyo Corporation since 1984. Futaba Soil is a compost of wastewater treatment sludge and coffee grounds. It is appreciated as a natural fertilizer for more than 30 years in rice and vegetable cultivation. It contains several different microorganisms at the concentration of more than 10^8 microbes/g of soil, preventing the overgrowth of other unwanted microorganisms. Futaba Soil activates the vegetation growth. It is particularly effective for cultivating green vegetables as it increases the yield and the color of these vegetables.
