Other Initiatives

ICE Tag® pin badge with Summit logo

This ICE Tag® is available to the medical team at the Media Center, some medical institutions, and the Emergency Medical Services of the Hiroshima city. The ICE Tag® is distributed at the International Media Center (IMC), where you can also register your information.

- The ICE Tag® is a pin badge that allows you to pre-register essential information for emergency care.
- The registered information is stored directly on the pin badge, ensuring that personal information cannot be accessed by our organization.
- The ICE Tag® includes your information, so please be careful not to lose it or use someone else's.

- ❑ When a patient is seen by medical staff, relevant information such as their medical history, current medications, and allergies is gathered.
- ❑ By registering your information on the pin badge, the medical information gathering process becomes easier for the medical institution. Medical institutions and emergency services can access this information using a dedicated app when providing medical care. Language and nationality can also be registered, which may help facilitating the arrangement of interpreters.
- ❑ Upon receiving the ICE Tag®, we kindly ask that you complete a short questionnaire, which will takes about 5 min of your time.
- ❑ This ICE Tag® was developed through the project led by the Department of Traumatology and Acute Critical Medicine, Osaka University Graduate School of Medicine.
